

Overmolded RADSOK® Connector

BACKGROUND

RADSOK® technology is based upon a stamped and formed flat grid, uniquely twisted into a hyperbolic geometry to provide robust, high density contact to the mating pin.

PROBLEM

To enhance the design and prevent fluid intrusion, Amphenol can overmold the RADSOK® connector creating a sealed application.

AIO SOLUTION

Amphenol has developed a comprehensive design that offers an overmolded RADSOK® cable assembly system. This creates an environmentally sealed connection system. In turn, this new design creates a more robust system and can broaden the scope of applications for the RADSOK® technology. Specifically, more harsh environment applications.
